

who is an iLEAD student?

Welcome to iLEAD

...an Individualized school that develops Leadership and Entrepreneurship through Academic Discovery

Given the right opportunity, students will do amazing things. ***iLEAD charter is another quality school of choice for students who want to follow their passions, get involved in the community, and learn real-world skills.*** Students at iLEAD learn all core areas of the curriculum, but they learn it in new and exciting ways. Through project-based learning and innovation, students are engaged—focusing on their individual strengths, growth targets, plans, and goals. ***The community is our classroom***—students work in and with our community to solve real-world problems. iLEAD allows students to *own* their learning—helping them become the leaders and entrepreneurs of tomorrow.

Why iLEAD?

Innovation, leadership, and entrepreneurship are at the heart of our school. iLEAD provides a 21st Century, skill-based education that challenges students to think critically, be creative, and communicate effectively in a collaborative manner. iLEAD allows students to *learn* the way they learn best, and to focus on things that interest them—making learning more engaging, fun, and personally relevant. Students learn the core curriculum that will prepare them for college or careers, through an innovative project-based program that offers a creative approach to learning. Students are challenged—and the result is that they, and our communities, benefit.

Technology

In order to be innovators, students need access to cutting-edge technologies that allow them to explore, research, communicate, and collaborate. Students at iLEAD use real-world technologies to solve real-world problems. From computer software to video equipment, welding materials to communications devices—students' needs drive the technologies we require. As students connect with our regional partners, they will gain access to valuable resources and learn critical communication and networking skills.

Community

An integral part of iLEAD is community involvement. Each student is actively involved in the community as part of our project-based and place-based philosophy. Through this involvement—whether it's working with local business owners or leading a service project—students begin to understand the connection they have to their community, and the assets they can offer in making the community a better place.

Leadership & Entrepreneurship

Leadership and entrepreneurship are the foundational pieces of iLEAD. Through individual, group, and community projects, students are encouraged to grow their skills in leadership and entrepreneurship.

Cultivating the entrepreneurial spirit in students requires that they understand their leadership style, and are willing to take risks. Students are taught to be both entre- and intra-preneurs—individuals who can create their own business or be valuable, creative employee-leaders.

Critical thinking and the ability to overcome obstacles is key to fostering the entrepreneurial mindset in our students.

iLEAD students are curious about the world around them.

They're willing to follow their passions.

They're interested in getting out in the community, trying new technologies, and *owning* their learning.

Above all—iLEAD students aren't afraid to try.

Are you, or is someone you know, an iLEAD student?
